Chief Complaint: Severe toothache in upper right molar

Duration: 3 days, started Tuesday morning

Severity: 8

Location: Upper right first molar (#3)

Triggers:

- Hot beverages
- Chewing on right side
- Worse at night

Current Medications:

- Ibuprofen 400mg - minimal relief

Allergies:

- Penicillin - causes rash

Previous Dental Work: Root canal on #14 six months ago

Medical Conditions:

- Type 2 Diabetes - controlled with Metformin
- Hypertension - takes Lisinopril

Clinical Summary: Patient reports severe (8/10) pain in upper right first molar (#3) for 3 days, worsened by hot beverages and chewing, worse at night. History notable for Type 2 Diabetes, hypertension, and penicillin allergy. Pain pattern suggests pulpitis or early abscess; NSAIDs provide minimal relief.

Urgency: HIGH

Red Flags:

- Night pain escalation suggests possible abscess
- Diabetes increases infection risk
- Penicillin allergy limits first-line antibiotics

Urgency Level: HIGH

Recommended Specialist: Endodontist

Routing Decision:

- Needs triage: No
- Pre-scheduled: Yes
- Appointment confirmed: Yes
- Doctor assigned: Dr. Ahmed Hassan
